Objective

Final-year Software Engineering student with hands-on experience building full-stack applications (NestJS, Next.js, TypeScript) and a SIWES internship at MTN. Focused on front-end and back-end engineering with growing interest in cloud computing and systems design.

Education

BSc Software Engineering (Final year, Babcock University) - 4.68/5.0

Relevant Course Work:
Front-end and Back-end Development, Calculus, C++, Java fundamentals, Data Structures, Artificial Intelligence, Machine learning, Software Engineering Principles, Database design and management(SQL), Python, Software Quality Assurance.

Skills

Technical
Python, React.js, Node.js(NestJS), Next.js, JavaScript,React Native + Expo, Git, GitHub, VS Code, REST APIs, Excel, Power BI, Linux, Cloud Computing with Azure.

Core
Problem-Solving, Team Collaboration, Data Analysis, Data Structures & Algorithms, Database Development, Web Development.

Projects & Experience

MTN Nigeria Communications Limited - Software Engineer Intern 01/2026 – 06/2026
- Consumed and integrated multiple APIs for dynamic web page development.
- Developed and implemented multiple responsive web pages using Next.js, focusing on performances and scalability.

Astar Tutorial - Software Engineer 01/2026 – 04/2026
- Developed a responsive academic resource website for A-Star Tutorials (Babcock University) using Next.js, used by 500+ students on campus.
- Implemented a structured UI system for organizing course contents
- Collaborated on frontend development and component design to enhance user experience and ensure fast, responsive page performance.

NOX STORE - Fullstack Engineer 03/2026 – 04/2026
- Independently built a fullstack e-commerce store (Next.js, TypeScript, Convex) with product pages, an admin dashboard, and a custom checkout/cart flow, used by hundreds of customers.

ACADEX (Student material vault) 04/2026 – 05/2026
- Minimum Viable Product for a Student Course Material Vault Independently designed and built a full-stack platform (with authentication) enabling students to upload and download course materials, solo end-to-end.

Invoicr — Freelancer Invoicing & Client Management Platform (NestJS, Next.js, TypeScript, Prisma) 07/2026 – 09/2026
Built a full-stack invoicing app with JWT authentication and ownership-based authorization guards to prevent unauthorized access to other users' data; migrated the database from SQLite to PostgreSQL and deployed to Render.

Frontend Lead — Babcock University Computing Club 08/2026 – ongoing
- Lead and mentor an 8-member student frontend team, organizing members into skill-based tiers with a structured training program.
- Led the front-end team to develop DARS, a report and proposal workflow platform used by all student directorates on campus (Next.js, TypeScript, Tailwind CSS, Supabase), enabling report submission, proposal approvals, dashboards, and role-based access control.

FAVO — Movie Favorites Web App React, JavaScript, Local Storage, Vercel 08/2025 – 09/2025
- Built and deployed a movie-discovery app integrating the TMDB API, giving users search access to a catalog of 1.3M+ movies, with save/bookmark functionality via Local Storage, requiring no backend or auth.

LOST-AND-FOUND PLATFORM 02/2024 – 03/2024
- Led a team of 5 students to build and launch a platform enabling students to report and recover lost items.

MENTAL HEALTH SUPPORT WEBSITE 10/2024 – 11/2024
- Designed and built a self-assessment platform that helps students reflect on stress and anxiety symptoms and directs them toward relevant coping resources or support services.

Certifications

- Meta Programming in Python (Coursera)
- Meta Introduction to Databases for Back-End Development
- Meta Frontend Development: HTML and CSS in Depth (Coursera)
- Meta React Specialization
